Protecting People, Property and Our Way of Life

Our North Lafourche Levee District

The NLLD works hard every day to improve drainage and enhance flood protection for you and 65,000 other residents north of the Intercoastal Waterway in Lafourche Parish. We serve approximately two-thirds of the parish's population and our system also protects hundreds of businesses from floodwaters, keeping our economy strong.

The District includes over 250 miles of levees and drainage canals and 40 pump stations throughout North Lafourche. NLLD's efforts and investments in construction equipment over the years have prevented flooding in our communities during tropical storms and hurricanes like Katrina, Rita, Gustav, and Ike.

Take a look at some of our completed drainage and flood protection projects on the back.
